Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 February 2008.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 18-27 and 33-72 is/are pending in the application.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 1, 2008 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 18-20, 22-23, 33-44, 46-48, 50-59 and 61-72 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ray (US 5,527,312) in view of Pepper et al. (US 5,989,255).

Ray discloses a method of providing spinal fixation including the steps of: providing a fixation device 40 and a screw 30 wherein the screw is advanced through a first vertebra and into the pedicle of a second vertebra (Fig. 1, col. 2, lines 26-67 and col. 3, lines 1-47).

Ray discloses all elements of the claimed invention except for: a fixation member having a proximal anchor with a slip ring that is advanced distally over retention structures on the body of the fixation member and wherein a second portion of the fixation member is separated and removed from the first portion of the fixation member after the proximal anchor is advanced distally along the fixation device.

Pepper et al. teach a screw including: a first portion 18 that forms a bone anchor; a second portion 13A that forms a proximal end; and wherein the first and second portions are detachably coupled to one another at a junction, i.e., the plane along which second portion 13A is separated from the first portion; and a proximal anchor including a washer or "slip ring" 26 that is advanced distally over retention structures on the body of the screw (Figs. 1-3, col. 3, lines 66-67, cols. 4 and 5).

Regarding claims 34, 49 and 64, Pepper et al. teach a proximal portion having flats 19 and 20 that engage a drill chuck 21.

Regarding claims 39-41, 54-56 and 69-71, it is noted that the length of the fixation device used is a function of the thickness of the underlying bone tissue.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have substituted the bone screw of Ray with the screw as, for example, taught by Pepper et al. wherein so doing would amount to mere substitution of one functionally equivalent fixation device for another within the same art and the selection of any of these fixation devices would work equally well in the Ray device.

The claimed method steps are rendered obvious by the above discussion.

Allowable Subject Matter

The indicated allowability of claims 18-20, 22-23, 27, 33-34, 46-59 and 61-72 is being withdrawn in view of the new rejections made in this action. The Examiner sincerely apologizes for any inconvenience caused to the Applicants by this action.

Claims 21, 26, 45 and 60 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
